

I wanted to give you a summary of Dr. Sandra Bevacqua's testimony with Shaklee.

Her Ph.D is in molecular biology and in 1995, she was working at Alamos Lab. One of the requirements was a physical exam which included heavy blood work. The lab ran her tests twice, then asked her to come back in for another test. As soon as the results were available, they asked her to come in immediately for a consult.

The physician told her to get her life in order, her blood work indicated that **she had one year to live**. Wake up call! Genetically, she inherited the genes from both sides for cardiovascular illness. Her age – 39 years old! A cousin had passed away two years older than she.

She went to a specialist in California for a second opinion. He said she only had six months to live! She told him she liked the first opinion better. He gave her a list of drugs which she had already researched. She brought up the side effects and listed the success rate which was dismal. He agreed.

So now she was out in the ocean of the unknown. She enlisted the aid of her personal physician who gave her alternative medicine's answers for the day. Things like snake oil and other obnoxious substances, and she asked her if she also recommended rattles! She tried every health food vitamin and supplement she could find.

The vitamins from the health food store did not move her numbers in the bloodwork.

To say that her research was extensive would be an understatement. All of the research at that time was either in Japan or Germany and her phone bill skyrocketed! She tried expensive vitamins, supplements, herbs, fiber sources – you name it, she tried it and had her blood tested every two to three weeks. She became an expert at reading the numbers in her bloodwork. She read anything and everything she could on the subject, and filled her library with the latest studies on the subject.

Dr. Sandra is a horse woman, and she rented out stalls to people in the area with horses. One of her customers was a young girl with a new horse. Her mother just happened to be a Shaklee Distributor. After the first conversation about Shaklee, she thought, this woman is no better than the hourly employees at the health food store, but when she heard the words, "Money Back Guarantee," her attitude changed. She woke up one morning with an epiphany – "It won't hurt to try." "What could I lose?"

This was the beginning of her adventure with Shaklee. Not only did her numbers drop. Her cholesterol had been literally off the charts, and had come down somewhat with the expensive foreign vitamins. But within weeks of taking the Shaklee products, her cholesterol was down to normal ranges. Her asthma and allergy symptoms ceased. She had dealt with infertility, and became pregnant with her son.

It didn't all happen at once, but the numbers in her bloodwork continued to come in line with normal ranges. **That was 20 years ago**. She is not only alive and well, but her energy has increased. The weight of her testimony and the research she developed brought about the groundwork for her consulting practice that has blessed many lives. Her research has not only helped people with heart diseases, but has also helped people with cancers and numerous other debilitating illnesses.

When we bring the body into the chemistry that God meant for optimum health, we are able to not only rid ourselves of illnesses, but also live productive lives well beyond the years that our genetic predispositions would allow. Long years and quality of life are within our grasp.
